ABSTRACT:

   PROBLEM TO BE SOLVED: To improve the convenience of an automatic answering telephone set.

   SOLUTION: External telephone sets 6a, 6b and a private branch of exchange A connect to a public telephone network 5a, and a portable telephone set 29 connects to a **mobile** telephone network 5b by a radio channel of a cell base station 28. Then the private branch of exchange A has a private branch of electronic exchange 1, extension telephone sets 2a-2c, a TAPI adaptor 3 and a personal computer(PC) 4, and **transfers an automatic answering message** from a caller and a caller telephone number to a telephone set at a remote place corresponding to a schedule content of a current user. Furthermore, the telephone set receiving the automatic answering message from the caller and the caller telephone number makes automatic dialing to the telephone number informed from the caller. Furthermore, the **schedule** content and the revision of the **transfer** destination telephone number corresponding to the content are set **based** on a control signal from an external telephone set.
